

Recognizer.hpp

```
graph BT; maincpp[main.cpp] --> recognizerhpp[Recognizer.hpp]; recognizercpp[Recognizer.cpp] --> recognizerhpp;
```

A diagram illustrating the relationship between three C++ files. At the top is a gray rectangular box labeled 'Recognizer.hpp'. Below it, on the left, is a white rectangular box labeled 'main.cpp', and on the right is another white rectangular box labeled 'Recognizer.cpp'. Two dark blue arrows point upwards from the top-right corner of 'main.cpp' and the top-left corner of 'Recognizer.cpp' towards the bottom edge of the 'Recognizer.hpp' box, indicating that both source files include the header file.

main.cpp

Recognizer.cpp
